Mark Carriage Clamps

Snow's Pattern Adjustable Clamps

The advantages derived from the use of these Clamps will be obvious to all using them. By placing the thumb and forefinger on the lever the jaws are opened, allowing the screw to move backward or forward to any required position, without turning. The pin which holds the jaws in place is subject to no strain, the pressure of the screw being received on the square and solid shoulder of the jaws. These clamps are all made in a workmanlike manner, of the best material, nicely fitted, and we feel confident that it is a superior Clamp in every respect.

Mark Steel Machinists' Clamp

Will Stand the Severest Test

Extra heavy, with button on end of screw, hung on a ball so as to accommodate itself to irregularities without bending the screw. The foot of the Clamp is planed.

Mark Heavy Steel Dog

WITH STEEL SCREWS, LATHE MADE AND HARDENED

This Dog has a very heavy boss, so that if the thread wears it can be tapped out and a larger screw substituted.
